

ROWEN BARBARY SUPPLE PLUS

Feed to:

- ✓ Performance horses undertaking demanding work
- ✓ Aged horses needing advance support
- ✓ Horses rehabilitating from injury

Key Points:

- ✓ Superior level of key joint support nutrients
- ✓ Maintains joint health & mobility
- ✓ Targets inflammation

MADE IN
OUR OWN
UK MILL

Product Description

Maintaining joint mobility in horses is vital for health and well-being, whether for performance horses competing at the top of their field or for leisure horses enjoying a slow pace or life that require advanced support. Supple Plus contains a superior level of key joint support nutrients designed to help maintain joint health, mobility and target inflammation.

Manufactured in our own dedicated UFAS audited mill, BETA NOPS compliant.

Each 43g serving (500kg horse rate) will supply your horse with 10,000mg of Glucosamine Hydrochloride, 10,000mg of MSM, 10,000mg of Boswellia Serrata, 5,950mg of Vitamin C, 4,000mg of Chondroitin Sulphate, 3,000mg Green Lipped Mussel and 50mg of Hyaluronic Acid.

Glucosamine HCL

Glucosamine is an amino-sugar which occurs naturally inside a horse's body. It is one of the most studied nutrients and has long been recognised for supporting cartilage and joint health, and is most effective when fed alongside Chondroitin Sulphate.

MSM (Methyl-Sulfonyl-Methane)

A high quality, bioavailable organic sulphur which helps support joint, tissue, tendon and ligament health. MSM is also known to help support the horses own natural anti-inflammatory and antioxidant processes.

Boswellia Serrata

An effective anti-inflammatory, Boswellic acids which are the key element to Boswellia, have been shown to reduce the degradation of glycosaminoglycans, therefore aiding joint health and maintenance.

Chondroitin Sulphate

A key component of cartilage, Chondroitin Sulphate is found to be most beneficial when combined with Glucosamine HCL and will help support cartilage production and regeneration, aiding mobility.

Green Lipped Mussel

High in Omega 3 fatty acids, Green Lipped Mussel has been linked to supporting the anti-inflammatory process, which is fundamental to maintaining healthy joints.

Hyaluronic Acid

A naturally occurring compound in synovial fluid, Hyaluronic Acid is available in both the injectable form and via an oral supplement, supporting the health of connective tissue and optimising joint junction.

Vitamin C

Known as ascorbic acid, Vitamin C is a water-soluble vitamin essential for horse health that plays a key role in neutralizing harmful free radicals which have been produced as a result of excessive wear and tear.
